COVER LETTER

Dear Hiring Team,

I am applying for the AI Orchestration Engineer role within State Street Global Cybersecurity. My work centers on designing and operating AI-agent workflows, multi-model orchestration, review controls, and self-hosted data systems for live business use. That combination aligns closely with your need for secure, auditable coordination among models, tools, APIs, enterprise knowledge, and human decision-makers.

I designed and operate an original, risk-graded R0–R5 workflow that routes prompt drafting, architecture review, solution review, and implementation across Claude Opus, Sonnet, and Codex by role. I also developed codex-bridge, tooling that coordinates Claude Code, Codex CLI, and an OpenSEO MCP source through ask, review, and implement modes. Its single-writer lock and durable run logs provide concrete controls for orderly, traceable agent execution.

For production clients, I designed and operate Auretris, an n8n workflow set that answers prospective-student questions and routes leads. I also customized, extended, and operate Kuanli, a forked open-source CRM running on Next.js, self-hosted Supabase/Postgres, Docker Compose, and hand-written row-level-security migrations. The public Auretris repository contains a sanitized architecture and operations overview, while production workflows, client information, credentials, and deployment configuration remain private.

My governance experience also includes designing and operating the Pantheon automated build pipeline, which produced two applications under a formal three-gate review protocol covering security, race conditions, seed integrity, and accessibility. Separately, I operate an Indian Non-Banking Financial Company and specified a planning-stage, ledger-first WhatsApp assistant with strict read-only and no-auto-write boundaries. Although that assistant is not yet a completed product, the design reflects direct familiarity with lending, ledger operations, and regulated financial processes.

I hold a UBC Bachelor of Applied Science in Electrical Engineering, maintain Engineer-in-Training status with EGBC, and am pursuing an MBA expected in 2027. My active cloud-platform experience is with Cloudflare and self-hosted Docker infrastructure; I have not yet worked with AWS, GCP, or Azure. I would welcome the opportunity to bring my orchestration, verification, and operations experience to State Street's governed enterprise-AI work.

Sincerely,

Pratham Goel
