SUMMARY

Automation and AI-agent engineer who designs and operates production workflows, multi-agent orchestration systems, and risk-graded review processes. Hands-on experience spans n8n automation, role-based LLM routing, self-hosted data infrastructure, gated verification, and scheduled agent operations. Brings an electrical-engineering foundation, live business-operations experience, and direct familiarity with lending and ledger processes in an Indian Non-Banking Financial Company.

CORE SKILLS

AI Orchestration: Multi-agent routing across Claude Opus, Sonnet, and Codex; prompt engineering; n8n; MCP configuration; Ollama

Data & Development: Python, TypeScript, JavaScript, SQL, PostgreSQL, Supabase, FastAPI, SQLAlchemy, Next.js, React

Infrastructure & Operations: Docker, Docker Compose, self-hosted services, Cloudflare Workers, Pages, Wrangler, and Tunnel; no AWS, GCP, or Azure experience

Governance & Verification: R0–R5 review workflows, role-based approvals, security and integrity tests, accessibility testing, durable run logs, sandboxed execution

SELECTED PROJECTS & OPERATIONS

Multi-Agent Orchestration and Build Tooling

- Designed and operate an original R0–R5 workflow that routes prompt drafting, architecture review, solution review, and implementation across Claude Opus, Sonnet, and Codex by role.
- Developed and operate codex-bridge, coordinating Claude Code, Codex CLI, and an OpenSEO MCP source through ask, review, and implement modes with a single-writer lock and durable run logs.

Auretris and Kuanli — Production WhatsApp Automation

- Designed and operate Auretris, an n8n workflow set that answers prospective-student questions and routes leads within a live, multi-tenant SaaS product serving an education consultancy and a second client.
- Customized, extended, and operate Kuanli, a forked open-source CRM using Next.js, TypeScript, self-hosted Supabase/Postgres, Docker Compose, Ollama, and hand-written row-level-security migrations.
- Maintain a sanitized public Auretris architecture and operations overview while keeping production workflows, client data, credentials, and deployment configuration private.

Pantheon Pipeline and Hermes Runtime

- Designed and operate the automated Pantheon pipeline that produced a FastAPI travel planner and a PocketBase animal-rescue PWA under a formal three-gate build and review protocol covering security, race conditions, seed integrity, and accessibility.
- Administer an always-on Hermes agent runtime with multiple profiles, cron scheduling, sandboxed execution, a kanban task orchestrator, and MCP-based build orchestration.

Business Operations and Financial-Automation Planning

- Operate Skeure Education and an Indian Non-Banking Financial Company, providing direct exposure to business operations, P&L responsibilities, lending, ledger processes, and the NBFC regulatory environment.
- Specified a planning-stage, ledger-first WhatsApp assistant for the NBFC with read-only and no-auto-write safety boundaries; the artifact remains a design and starter scaffold rather than a completed fintech product.

PROFESSIONAL EXPERIENCE

Project Coordinator, Electrical Infrastructure | InfiSol Technical Services Ltd.

Vancouver, BC | May 2024–September 2025

- Coordinated AutoCAD-based pathway and routing design, site-survey interpretation, material take-offs, and drawing QA for commercial and municipal FTTN/FTTH projects.
- Supported the Granville–Broadway ICT upgrade, rural Alberta telecom expansion, and Vancouver Island fiber-backbone upgrade.
- Coordinated with field teams during installation and commissioning and maintained project documentation across engineering revisions.

EDUCATION & CREDENTIALS

Bachelor of Applied Science, Electrical Engineering, University of British Columbia — conferred May 2024

MBA Candidate, Lovely Professional University — expected 2027; in progress

Engineer-in-Training, Engineers and Geoscientists BC — 2024–present
