COVER LETTER

Dear Cohere Hiring Team,

I am applying for the Forward Deployed Engineer, Infrastructure Specialist role supporting North. The opportunity to connect an AI product with customer engineering environments closely matches my experience operating client-facing automation, administering self-hosted infrastructure, and coordinating technical deployments. I would bring an implementation mindset grounded in production operations and formal electrical-engineering training.

I design and operate Auretris and Kuanli, a live, multi-tenant system used by an education-consulting business and Skinitutes. Auretris uses n8n workflows to answer prospective-student questions and route leads; Kuanli is a customized and operated fork of an open-source WhatsApp CRM. I administer its Docker Compose environment, self-hosted Supabase/PostgreSQL deployment, hand-written row-level-security migrations, and Ollama local inference. The public Auretris repository provides a sanitized architecture and operations overview, while production workflows, client data, credentials, and deployment configuration remain private.

I also designed a risk-graded R0–R5 review and approval workflow that routes work across Claude Opus, Claude Sonnet, and Codex by role. Separately, I administer an always-on agent runtime with scheduled execution and sandboxed environments. At InfiSol Technical Services, I interpreted site surveys, supported AutoCAD routing design and material take-offs, performed drawing QA, and coordinated field teams during installation and commissioning across three fiber-infrastructure projects. These experiences developed the practical discipline to work across technical constraints, stakeholders, and live operations.

My present infrastructure depth is in self-hosted Docker/Postgres systems and Cloudflare rather than AWS, GCP, or Azure. I also have not administered production Kubernetes clusters or Helm deployments. Those are meaningful gaps against this role, but the underlying work of configuring multi-container systems, managing data boundaries, coordinating rollouts, and operating customer-facing automation gives me a strong foundation for learning Cohere's deployment stack.

I hold a UBC Bachelor of Applied Science in Electrical Engineering and am an EGBC Engineer-in-Training. I also have an open Canadian Post-Graduate Work Permit valid for any employer through June 6, 2027. I would welcome the opportunity to discuss how my automation, infrastructure, and client-delivery experience could contribute to North deployments.

Sincerely,

Pratham Goel
