COVER LETTER

Dear Thumbtack Hiring Team,

I am applying for the Software Engineer, AI/ML Infrastructure position. I design and operate AI-agent orchestration, production automation, and verification-focused delivery systems. Thumbtack's opportunity to help product engineers and applied scientists develop and run GenAI applications aligns closely with the tooling and operational work I have pursued independently and for live business clients.

I designed and operate an original, risk-graded R0–R5 workflow that routes work among Claude Opus, Sonnet, and Codex by role. Its formal review and approval stages support deliberate validation of AI-generated output. I also designed the Pantheon automated build pipeline, which produced FastAPI/SQLAlchemy and PocketBase-backed applications under a three-gate protocol covering security, race conditions, seed integrity, and accessibility. The animal-rescue application alone includes more than 30 verification scripts. This work has required me to critique generated code, identify failure modes, and refine outputs rather than accept them unexamined.

My production operations experience includes Auretris, a set of n8n WhatsApp workflows serving two clients, and Kuanli, a customized and extended open-source CRM fork that I operate using Next.js, TypeScript, self-hosted Supabase/PostgreSQL, Docker Compose, and Ollama. I wrote the PostgreSQL row-level-security migrations used in that environment. Auretris's public repository provides a sanitized architecture and operations overview, while its production workflows, deployment configuration, credentials, and client data remain private.

I have also built a bridge that coordinates Claude Code, Codex CLI, and an OpenSEO MCP source through ask, review, and implement modes, supported by a single-writer lock and durable run logs. Separately, I administer an always-on agent runtime with scheduled execution and Docker/Singularity sandboxes. These projects have given me practical experience across orchestration, backend tooling, databases, testing, deployment, and ongoing system operation at modest production scale.

My UBC electrical-engineering degree and Engineer-in-Training credential support a disciplined engineering approach, while my in-progress MBA broadens my business perspective. I hold an open Canadian Post-Graduate Work Permit valid through June 6, 2027 and can work for any Canadian employer. I would welcome the opportunity to discuss how my hands-on AI tooling experience could contribute to Thumbtack's ML Infrastructure team.

Sincerely,

Pratham Goel
