SUMMARY

Automation and AI-agent engineer who designs and operates multi-agent orchestration, production workflow automation, and verification-focused delivery systems. Hands-on experience with self-hosted PostgreSQL, Docker-based deployments, AI coding tools, and live client systems, supported by an electrical-engineering foundation and professional engineering credential. Comfortable learning new technologies and moving ambiguous work from design through operation.

CORE SKILLS

Languages & Data: Python, TypeScript/JavaScript, SQL, PostgreSQL, SQLite, Supabase, hand-written row-level-security policies

AI & Automation: Multi-agent orchestration, Claude Opus/Sonnet, Codex, n8n, MCP, Ollama, prompt engineering, AI-output review

Backend & Delivery: FastAPI, SQLAlchemy, Pydantic, Next.js, React, Docker Compose, Playwright, pytest, Cloudflare Pages, Wrangler

Engineering: Software design fundamentals, data structures and algorithms coursework, AutoCAD, fiber-optic infrastructure, technical QA

SELECTED PROJECTS & OPERATIONS

Multi-Agent Build and Review Pipeline

- Designed and operate an original risk-graded R0–R5 workflow that routes work among Claude Opus, Sonnet, and Codex by role, with formal review and approval stages.
- Authored custom Claude Code skills for work routing, prompt drafting, university onboarding, and solution review, plus a reusable skill library currently maintained locally.

Pantheon Automated Application Pipeline

- Designed and operate a three-gate automated build and verification pipeline covering security, race conditions, seed integrity, and accessibility while validating and refining AI-generated application code.
- Directed the pipeline that produced a FastAPI/SQLAlchemy travel planner and a PocketBase-backed animal-rescue PWA; animal-rescue includes more than 30 verification scripts.

Auretris and Kuanli — Production Client Automation

- Operate live, multi-tenant WhatsApp automation for two clients through Auretris n8n workflows and Kuanli, a customized and extended open-source CRM fork using Next.js, TypeScript, Supabase/PostgreSQL, Docker Compose, and Ollama.
- Published a sanitized Auretris architecture and operations overview; production workflows, deployment configuration, credentials, and client data remain private.

AI Operations Tooling

- Built a bridge coordinating Claude Code, Codex CLI, and an OpenSEO MCP source through ask, review, and implement modes, with a single-writer lock and durable run logs.
- Administer an always-on agent runtime built on an open-source framework, including scheduled execution, configured agent profiles, kanban orchestration, and Docker/Singularity sandboxes.

PROFESSIONAL EXPERIENCE

Project Coordinator, Electrical Infrastructure | InfiSol Technical Services Ltd.

Vancouver, BC | May 2024–September 2025

- Produced AutoCAD pathway and routing designs from site surveys, completed material take-offs, and performed drawing QA for commercial and municipal FTTN/FTTH projects.
- Coordinated field teams during installation and commissioning for Vancouver, rural Alberta, and Vancouver Island telecom infrastructure work.

Design Team Admin & Mechatronics Support | UBC Baja

September 2021–August 2023

- Maintained documentation, timelines, and revision control for a 20-plus-member electrical sub-team while supporting mechatronics activities.

EDUCATION & CREDENTIALS

Bachelor of Applied Science, Electrical Engineering, University of British Columbia — Conferred May 2024

MBA Candidate, Lovely Professional University — In progress; expected 2027

Engineer-in-Training, Engineers and Geoscientists BC — 2024–present

Canadian Work Authorization: Open Post-Graduate Work Permit valid through June 6, 2027; authorized to work for any employer
