COVER LETTER

Dear Hiring Manager,

I am applying for BDO's AI Engineer – Generative & Agentic AI position. I design and operate production workflow automation and multi-agent systems for real businesses, combining hands-on implementation with formal review controls and day-to-day operational responsibility. This experience aligns closely with BDO's focus on turning business requirements into dependable AI-powered applications.

I currently operate Auretris and Kuanli for two live client businesses. Auretris is an n8n-based WhatsApp AI workflow set that answers prospective-student questions and routes leads. Kuanli is a customized and extended fork of an open-source CRM that I operate with Next.js, TypeScript, self-hosted Supabase/Postgres, hand-written row-level-security migrations, and Docker Compose. The public Auretris repository provides a sanitized architecture and operations overview; production workflows, client information, credentials, and deployment configuration remain private.

I also designed an original R0–R5 risk-graded workflow that routes work across Claude Opus, Sonnet, and Codex by role, with formal review and approval gates. Separately, I designed and operate the Pantheon pipeline that produced FastAPI/SQLAlchemy and JavaScript/PocketBase applications under a three-gate verification protocol covering security, race conditions, seed integrity, and accessibility. I administer an always-on agent runtime with cron scheduling and sandboxed execution, and I have configured and troubleshooted multiple MCP servers connecting agents with tools and data sources.

My infrastructure experience is concentrated in Docker-based self-hosted systems and Cloudflare Workers, Pages, Wrangler, and Tunnel. I do not yet have hands-on AWS, Azure, or GCP experience, so that requirement would represent a learning step. I would bring practical experience deploying and operating multi-service systems, diagnosing integrations, and applying structured engineering controls to AI-assisted delivery.

My University of British Columbia electrical engineering degree and Engineer-in-Training credential ground my work in engineering discipline. I am also an MBA candidate at Lovely Professional University, with expected completion in 2027, strengthening my ability to connect technical designs with business needs. I would welcome the opportunity to contribute this combination of production automation, agent orchestration, and operational ownership to BDO.

Sincerely,

Pratham Goel
