COVER LETTER

Dear Aventyr Security Hiring Team,

I am applying for the AI Automation & Operations Engineer role because its combination of workflow engineering and practical business operations closely matches my work. I design and operate AI-agent systems for live businesses, then use what I learn from their day-to-day processes to identify useful automation opportunities. Aventyr's focus on scheduling, finance, logistics, and compliance is especially compelling because these are consequential workflows where reliability and clear operating boundaries matter.

A concrete example is Auretris, a production n8n workflow set that answers prospective-student FAQs and routes leads for a multi-tenant WhatsApp SaaS product serving two client businesses. Alongside it, I customized, extended, and operate Kuanli, an open-source WhatsApp CRM fork running with Next.js, TypeScript, self-hosted Supabase/PostgreSQL, hand-written RLS migrations, Docker Compose, and Ollama. Together, these systems automatically handle repetitive inquiries and lead routing while supporting ongoing client operations.

I also designed and operate an original, risk-graded multi-agent pipeline that routes architecture, implementation, and review work among Claude Opus, Sonnet, and Codex. Its role-specific policies and approval gates reflect how I approach automation: define the risk, assign the right tool, verify the result, and retain human control where needed. Separately, I administer an always-on personal agent runtime with cron scheduling, sandboxed execution, task orchestration, and MCP-based build tooling.

My operational perspective comes from running an education-consulting business and an Indian non-banking financial company. The latter provides direct exposure to lending, ledger processes, and a regulated operating environment. I have specified a planning-stage WhatsApp ledger assistant with strict read-only and no-automatic-write boundaries around an existing Excel workbook. I am also an MBA candidate, with completion expected in 2027, and hold a Bachelor of Applied Science in Electrical Engineering from the University of British Columbia.

I would bring hands-on n8n, scripting, self-hosting, and agent-orchestration experience, together with a willingness to learn Aventyr's payroll, AP/AR, scheduling, and compliance processes in detail. I am based in Vancouver and hold an open Canadian Post-Graduation Work Permit valid through June 6, 2027. I would welcome the opportunity to discuss how I could help build and refine Aventyr's internal automations.

Sincerely,

Pratham Goel
