COVER LETTER

Dear Hiring Team,

I am applying for the AI Specialist position with Sonepar Canada. I design and operate production automation and multi-agent AI systems, covering workflow design, deployment, testing, approval controls, and ongoing client operations. This hands-on background aligns with Sonepar's need for someone who can translate approved use cases into reliable technical solutions while working within governance and operational requirements.

I operate Auretris and Kuanli for real clients. Auretris is a live, multi-tenant n8n chatbot that answers prospective-student questions and routes leads. Kuanli is a customized and extended fork of an open-source CRM, operated on a self-hosted Next.js, Supabase, and PostgreSQL stack with hand-written row-level-security migrations. Its public companion is a sanitized Auretris architecture and operations overview; production workflows, client data, credentials, and deployment configuration remain private. This work has given me direct experience supporting users and maintaining automation connected to active business operations.

I also designed a risk-graded R0–R5 review and approval workflow that routes work across Claude and Codex models by role. A separate automated pipeline I designed and operate produced FastAPI and JavaScript applications under a three-gate verification protocol covering security, race conditions, seed integrity, and accessibility. I additionally administer an always-on agent runtime with scheduled execution, multiple profiles, sandboxed environments, and MCP-based orchestration. These systems demonstrate practical experience with reusable prompts, controlled delivery, technical troubleshooting, and verification-heavy AI operations.

My active cloud experience is with Cloudflare, self-hosted Docker environments, and PostgreSQL rather than Azure, AWS, or GCP; I have not yet used Microsoft Foundry, Copilot Studio, Azure AI, or Power Platform. I would bring transferable experience in conversational automation, agent orchestration, access controls, and production support while developing the Microsoft-platform expertise required by the role. My UBC Electrical Engineering degree and EGBC Engineer-in-Training credential provide a formal engineering foundation. I am authorized to work for any Canadian employer under an open Post-Graduation Work Permit valid through June 6, 2027.

Sincerely,

Pratham Goel
