SUMMARY

Applied AI and automation practitioner who designs and operates production workflows, multi-agent systems, and self-hosted infrastructure for real client and business use. Combines hands-on n8n, PostgreSQL, Docker, Cloudflare, and model-orchestration experience with a UBC Electrical Engineering foundation and project coordination in telecom infrastructure. Brings a practical approach to access controls, review gates, documentation, stakeholder translation, and maintainable automation.

CORE SKILLS

AI & Agent Engineering: n8n workflow automation, multi-agent orchestration, Claude Opus/Sonnet/Codex routing, MCP configuration, Ollama local inference, REST APIs, webhooks

Systems & Data: Python, TypeScript/JavaScript, PostgreSQL, self-hosted Supabase, hand-written RLS policies, Docker and Docker Compose

Governance & Quality: Risk-graded R0–R5 review workflows, approval gates, durable run logs, single-writer locking, sandboxed execution, accessibility and security checks

Engineering & Delivery: Cloudflare Pages and Wrangler, AutoCAD, fiber-optic infrastructure, engineering-drawing QA, documentation, field coordination

SELECTED PROJECTS & OPERATIONS

Auretris and Kuanli | Live Client Automation

- Design and operate Auretris, an n8n-based WhatsApp AI chatbot that answers prospective-student FAQs and routes leads for two live clients within a multi-tenant SaaS operation.
- Customized, extended, and operate Kuanli as a fork of the open-source ArnasDon/wacrm CRM, using Next.js, TypeScript, self-hosted Supabase/PostgreSQL, Docker Compose, Ollama, and hand-written row-level-security migrations.
- Maintain a public Auretris repository as a sanitized architecture and operations overview while keeping production workflow exports, client data, credentials, and deployment configuration private.

Multi-Agent Orchestration and Gated Delivery

- Designed an original R0–R5 review and approval workflow that routes work across Claude Opus, Sonnet, and Codex according to defined architecture, implementation, prompt-drafting, and review roles.
- Developed a Claude-to-Codex orchestration bridge with ask, review, and implementation modes, single-writer locking, and durable run logs; also authored a reusable Claude Code skill library.
- Designed and operate the automated Pantheon build pipeline that produced a FastAPI travel planner and a JavaScript animal-rescue PWA under a formal three-gate protocol covering security, race conditions, seed integrity, and accessibility.

Hermes Agent Runtime | Agent Operations

- Administer an always-on, open-source-based agent runtime with multiple configured profiles, cron scheduling, Docker and Singularity sandboxes, a kanban task orchestrator, and MCP-based build orchestration.

PROFESSIONAL EXPERIENCE

Project Coordinator, Electrical Infrastructure | InfiSol Technical Services Ltd.

Vancouver, BC | May 2024–September 2025

- Coordinated AutoCAD-based pathway and routing design, site-survey interpretation, material take-offs, and drawing QA for commercial and municipal FTTN/FTTH projects.
- Supported field teams during installation and commissioning across the Granville–Broadway, rural Alberta, and Vancouver Island fiber-infrastructure projects.

Design Team Admin & Mechatronics Support | UBC Baja

September 2021–August 2023

- Maintained documentation, timelines, and revision control for an electrical sub-team of more than 20 members.

EDUCATION & CREDENTIALS

Bachelor of Applied Science, Electrical Engineering, University of British Columbia — Conferred May 2024

Engineer-in-Training, Engineers and Geoscientists BC — 2024–present

MBA candidate, Lovely Professional University — In progress; expected 2027

Canadian work authorization: Open Post-Graduate Work Permit valid through June 6, 2027
